CONTENTS:

Aim is to help navigate the mapping database.

https://iotsecuritymapping.uk/open-data-files-latest-v4/

There are two components in this project. The backend which reads the database from local file or webresouce and stores the data in a structure.

The front end allows for making structures/filters and export.

..code-block::bash

python3 ui.py

CLASS OVERVIEW:

Author: M.A. Marosvolgyi 2021 (c)Anywi

class prototype.**Processor**(*guides*)

Processor returns an object which can do manipulations on the set of guides.

> **Parameters guides** (*CodeOfPracticeGuide*) – list of guides

example:

```
>>> import prototype as pt
>>> list = processor.getOccurencesOfOrganisation(["IEEE"])
>>> print (pt.propsOf(list[0]))
GuideLine No: 1
IEEE
IoT Security Principles and Best Practices
5
IoT devices should not use easy-to-guess username/password credentials, such as
↪admin/admin. Devices should not use default credentials that are invariant
↪across multiple devices and should not include back doors and debug-mode
↪settings (secret credentials established by the device's programmer) because,
↪once guessed, they can be used to hack many devices.
Each device should have a unique default username/password, perhaps printed on
↪its casing, and preferably resettable by the user. Passwords should be
↪sophisticated enough to resist educated guessing and so-called brute force
↪methods.

↪of_things_feb2017.pdf
Use strong authentication
1
```

generateSetOfOrganisations()

Generates a set of all organisations occuring in all guides.

getMatrix()

Return matrix of guides against organisations involved

getOccurencesOfOrganisation(*organisations*)

Returns an ordered list (by Guide ID) of guides which belong to organisations listed in the argument variable (list) organisations.

> **Params organisations** list of organisations
>
> **Type** list of CodeOfPractiveGuideline
>
> **Returns** sorted list of guides
